

Terraform task - 2

Create 2 EC2 instances on 2 different regions and install nginx using terraform script.

```
main.tf x
terraform-task1 > main.tf > resource "aws_instance" "west_server" > tags

1  # 1. Providers configured
2  terraform {
3      required_providers {
4          aws = {
5              source = "hashicorp/aws"
6              version = "~> 5.0"
7          }
8      }
9  }
10
11 # 2. Default Provider1 (Primary Region: N. Virginia)
12 provider "aws" {
13     region = "us-east-1"
14 }
15
16 # 3. Provider2 with an Alias (Secondary Region: Oregon)
17 provider "aws" {
18     alias   = "west"
19     region = "us-west-2"
20 }
21
22 # 4. Nginx Installation
23 locals {
24     nginx_bootstrap = <<-EOF
25     |               | #!/bin/bash
26     |               | apt-get update -y
27     |               | apt-get install nginx -y
28     |               | systemctl start nginx
29     |               | systemctl enable nginx
30     |               | EOF
31 }
32
33 # 5. Launching EC2 in the us-east-1
34 resource "aws_instance" "east_server" {
35     ami           = "ami-0b6d9d3d33ba97d99"
36     instance_type = "t2.micro"
37
38     user_data      = local.nginx_bootstrap
39
40     tags = {
41         Name = "Linux-Server1"
42     }
43 }
44
45 # 6. Launching Ubuntu EC2 in us-west-2 using the provider alias
46 resource "aws_instance" "west_server" {
47     provider      = aws.west
48     ami           = "ami-02167eae61967e403"
49     instance_type = "t2.micro"
50
51     user_data      = local.nginx_bootstrap
52
53     tags = {
54         Name = "Linux-Server2"
55     }
56 }
```

```

PS C:\Users\Kousick Devaraj\Desktop\DevOps\terraform\terraform-task1> terraform init
Initializing provider plugins found in the configuration...
- Reusing previous version of hashicorp/aws from the dependency lock file
- Using previously-installed hashicorp/aws v5.100.0

Initializing the backend...

Initializing provider plugins found in the state...

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see
any changes that are required for your infrastructure. All Terraform commands
should now work.

If you ever set or change modules or backend configuration for Terraform,
rerun this command to reinitialize your working directory. If you forget, other
commands will detect it and remind you to do so if necessary.
PS C:\Users\Kousick Devaraj\Desktop\DevOps\terraform\terraform-task1>

```

Output:

Name	Instance ID	Instance state	Instance type	Status check	Availability Zone	Public IPv4 DNS	Public IPv4
Linux-Server1	i-0a304eabba2d263f7	Terminated	t2.micro	-	us-east-1d	-	-
Linux-Server1	i-086fe6b4f4292a538	Running	t2.micro	2/2 checks passed	us-east-1d	ec2-3-91-88-4.compute...	3.91.88.4

Welcome to nginx!

If you see this page, the nginx web server is successfully installed and working. Further configuration is required.

For online documentation and support please refer to nginx.org.
Commercial support is available at nginx.com.

Thank you for using nginx.
